

Irrigation & Waterworks

Canal Gate with Crank

Three Way Economy: Save water, labor, and maintenance with this improved canal gate designed especially for concrete lined ditches.

Well built and Easily Installed: Built of heavy gauge steel and treated to resist rust and corrosion, this gate can be easily installed in old or new ditches with a minimum amount of time and labor.

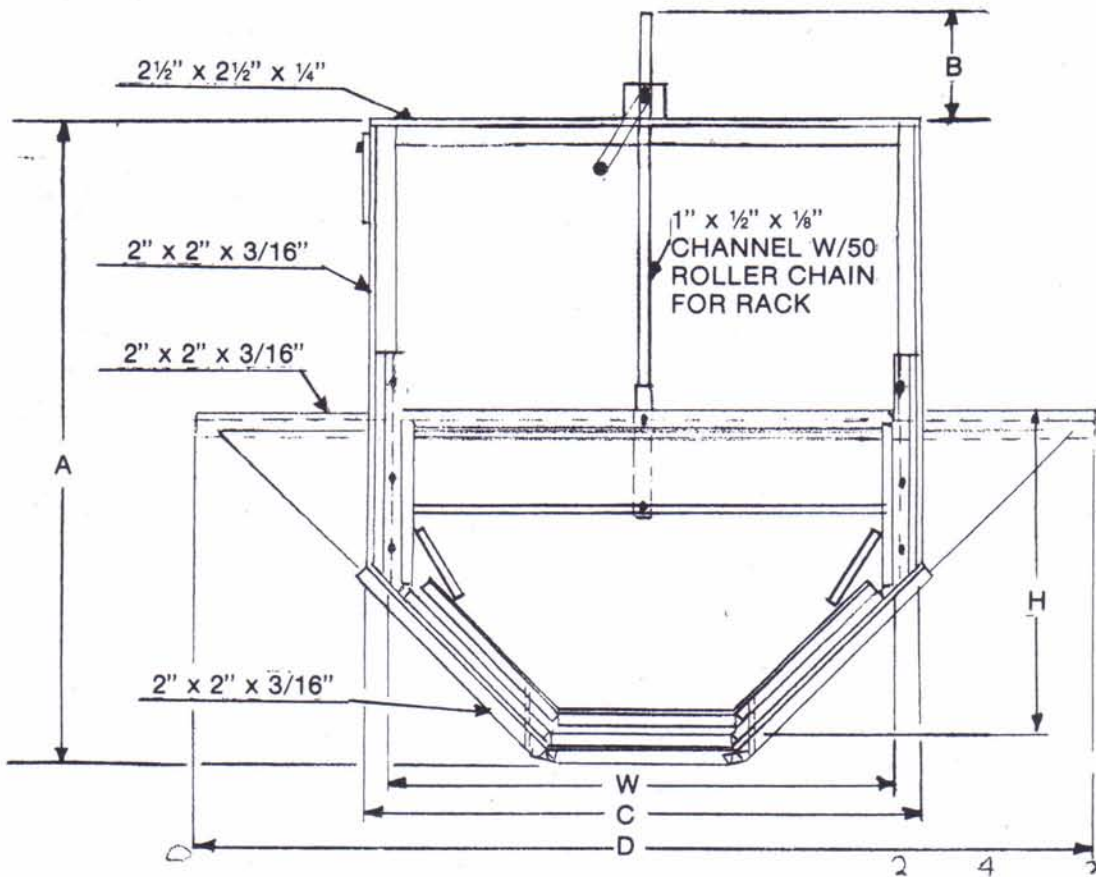

One Handed Operation for Precise Adjustments: With the gear drive, the slide can be fully raised or lowered using just one hand in only four revolutions, or it can be held partially open by the simple twist lock for complete flow control.

Water-tight: A water tight closure is assured by providing a Neoprene gasket for the galvanized slide to seal against.
