

Irrigation & Waterworks

Clip Type Port Valve

EASY-TO-INSTALL OPENED OR CLOSED IN SECONDS

It can easily be installed in either new or old ditches in just minutes. With the ring firmly anchored in concrete, the valve can be opened or closed in seconds.

GUARDED AGAINST RUST OR CORROSION

Rings and handles are plated and the lids are galvanized to guard against rust or corrosion.

WATER-TIGHT

The spring action of the handle pressing the lid against the ring insures a water-tight closure.

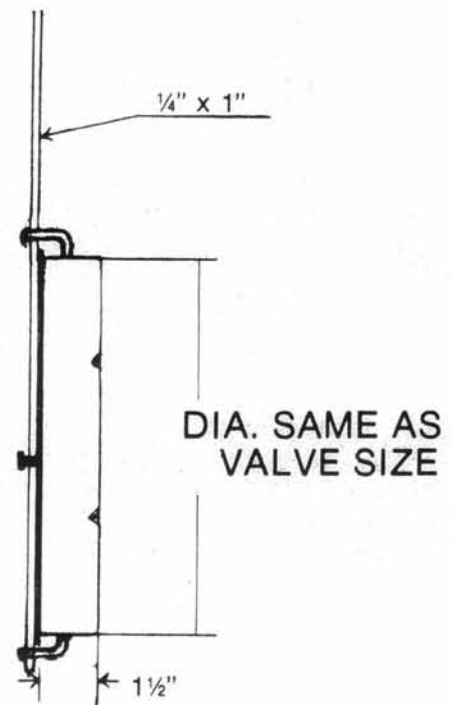

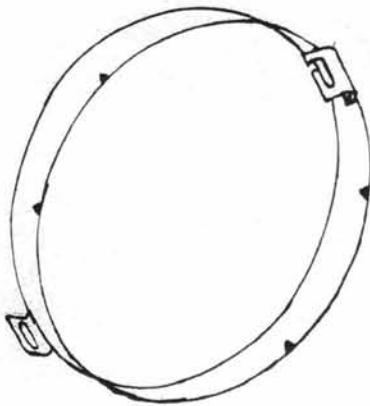

EASY TO REMOVE AND STORE

The handle and the lid can be removed and safely stored when the ditch is not in use.

Irrigation & Waterworks

Clip Type Port Valve

The Clip Type Valve is designed for use in concrete lined ditches, where a simple flow control valve is suitable. Clip valves are readily available for an 8", 12" or 14" port, or can be specially ordered in larger sizes. Rings, lids or handles can be ordered separately.
